

NCI Current Engineering Projects Spring 2011

Upper/Lower River Road Phase 4 Location Site

Upper/Lower River Road Great Falls, Montana

Water and Wastewater Improvements

Water and wastewater facilities plan (PER) for homes in several subdivisions adjacent to the City of Great Falls. Wastewater alternatives included construction of a “stand alone” collection and treatment system using facultative or aerated ponds followed by spray irrigation or discharge to the Missouri River, or connection to City utilities. NCI will continue their services by providing design and bidding phases of this development and eventually providing the construction administration and inspection for the projects.
