

## **NCI Current Engineering Projects Spring 2011**

**Sand Coulee's Current Water Tank**

### **Sand Coulee**

#### **Sand Coulee, Montana**

##### **Water System Improvements**

The Sand Coulee water system currently has 73 single family year round residential connections. The water system utilizes two well sources. The community relies upon a single steel bolted storage tank for water storage with a rated capacity of approximately 100,000 gallons. The distribution system is composed of 4", and 6" piping of various materials. Service lines are currently comprised of different materials such as galvanized iron, poly, and copper piping.
