

NCI Current Engineering Projects Spring 2011

The Town of Stanford

Water System Improvements

NCI prepared a Preliminary Engineering Report (PER), has prepared DNRC, STAG, and WRDA grant applications, and has initiated design for Stanford's water system improvements. Stanford completed limited water system improvements in 2003. Both water supply wells have diminished in yield, and Stanford faces significant water shortages each year. The thrust of proposed improvements is to rehabilitate 3 of Stanford's 7 water supply wells. Stanford is currently ranked 17th out of 110 DNRC RRGL Grant projects and anticipates funding by the 2011 legislature.
